

Challenge #6: HTML Styles – CSS

In this challenge, I implemented the three ways that you can implement CSS on your HTML file. These are Inline, Internal, and External.

Inline:

```
25 <body>
26   <!--* INLINE CSS -->
27   <h1 style="color: red;">Hello World!</h1>
28   <p style="color: green; font-size: 2rem;">Luis Lloyd P. Tolentino</p>
29
```

Internal:

```
9   <style>
10     * {
11       margin: 0;
12       padding: 0;
13       font-family: Arial, Helvetica, sans-serif;
14     }
15     div {
16       background-color: black;
17       padding: 2rem;
18     }
19     div h2 {
20       color: orange;
21     }
22   </style>
23
```

```
29
30   <!--* INTERNAL CSS -->
31   <div>
32     <h2>I am from 1/BSCS/A</h2>
33   </div>
34
```

External:

```
8 <link rel="stylesheet" href="styles.css">
```

```
index.html styles.css x script.js
styles.css > .external h3
1 .external {
2   background-color: gray;
3 }
4 .external h3 {
5   color: white;
6 }
```

```
35 <!--* EXTERNAL CSS -->
36 <div class="external">
37   <h3>This is Challenge #6</h3>
38 </div>
```

Output:
