Challenge #1: Goal

In this document, I will tackle about my goals and plans for the project website that I will build. W3School will be my training ground when learning about website development. Although I already have advanced knowledge regarding web development, I will still learn from W3School because there are things that I am not confident about when making a website.

Honestly, I still don't have any idea what kind of website I will be doing. I am still finding ideas and purposes for the website that I will be making. But I am thinking of a website that will be useful to everyone, especially students like me. It will be a mixture of my interests, my hobbies, and the needs of every student.

In this website project, I am planning to build it using the ReactJS library and the TailwindCSS framework in order to improve my knowledge about these technologies.

That will be all. See you soon on my website.
